Inulin - Nutrimed®

dietary supplement

Brief Description

Kiev 2009

Brief description of Inulin-Nutrimed®

It is for good reason that diabetes is considered to be the disease of the civilization – between 2 to 4% of the world population suffer from this disease, and in some countries this figure exceeds 10%. Apart from heredity reasons, a common cause of diabetes is overweight – usually a result of an of unhealthy life style.

For about 10 years the **Nutrimed** company has been producing a unique plant preparation - **Inulin-Nutrimed®**.

Inulin-Nutrimed® is a completely natural herbal supplement which is produced exclusively by **Nutrimed**. It consists of the dry extract made from the fresh chicory roots (*Cichorium intubys*) and contains no less than 50% of high-molecular inulin.

The technology and “know-how” of Inulin – developed exclusively by and for Nutrimed Ltd. Hence the manufacturing process cannot be reproduced by anyone else.

This technology has some similarities with the technology of some western companies. But several new traits in our technology make it possible to produce substance, which has considerably stronger biological activity and medical effects. Due to these new features applications of inulin produced by „Nutrimed“ is different to that known in other countries.

In western countries inulin is used mainly as dietary ingredient of confectionary, milk products and other food products or as dissoluble at room temperature powder, which daily application dosage is about 10-15 g. It doesn't have significant influence on human metabolism.

Inulin-Nutrimed® can be dissolved at a temperature of about 70 C, has daily application dosage of 2-3 g (4-6 capsules) and has a much more powerful activity. One of the reasons is that Inulin – Nutrimed has very complicated molecular structure and very high molecular weight.

Inulin-Nutrimed® has been certified by the Ministry of public health of Ukraine as a herbal diet supplement and is being successfully selling at the Ukrainian pharmaceutical market since 1999. Hundred of thousands of patients benefited from **Inulin-Nutrimed®** and no side effects were reported.

Inulin - Nutrimed®

The numerous clinical investigations made by experts of the leading Kiev scientific medical centres proved, that the application of **Inulin-Nutrimed®** has the following statistically authentic physiological effects:

- it decreases the blood glucose and serum triglycerides level
- it reduces the serum cholesterol and can therefore be recommended as a preventive remedy of good antisclerotic virtue
- it prevents the development of vascular diseases by diabetes
- it allows to reduce the daily dosage of the main saccharolytic chemical medicine
- it is specially effective during the initial stages of the type II diabetes (non-insulin-dependent)

1 capsule contains:

- 500 mg of extract from fresh chicory roots
(*Cichorium intubys*) produced according to the original patented technology of the Nutrimed company.

Recommended dose:

1-2 capsules 3 times a day 15-20 minutes before meal during 3-4 months. If necessary, the course should be repeated in 1-2 months.

Package: 60 capsules.
